

A HEALTH TRACKING APP

Introduction

a comprehensive platform designed to help users monitor and improve their well-being. With intuitive user inputs, individuals can track key health metrics such as blood pressure, water intake, weight, steps walked, diabetes status, workout progress, calorie consumption, and stress management. This personalized tool empowers users to maintain a healthier lifestyle by analyzing trends, setting goals, and making informed decisions. Whether you're focusing on fitness, diet, or overall wellness, our Health Tracker Website is your companion for a balanced and healthier life.

MADE USING

A

Angular Js

Used for building the front-end, handling user interactions, and dynamically updating the UI.

M

Mongodb

Stores user data such as health inputs and signup credentials in a NoSQL database.

E

Express.js

Serves as the backend framework to handle HTTP requests and route API calls.

N

Node.js

Provides the runtime environment for executing JavaScript on the server-side.

Database

Connectivity

Our website integrates MongoDB Atlas for securely storing user signup data in the cloud. Using Mongoose, we define a structured schema to efficiently manage and retrieve user information. This ensures a seamless and secure signup experience for all users.

Thank you
